

INVESTOR PITCH DECK

# The AI Operating System for Modern Business

TEMACORE builds vertical AI, enterprise software and intelligent workflow infrastructure across InsurTech, FinTech and AI-enhanced business operations.

**\$3k–\$5k**

**AI**

workflow intelligence in  
development

Prepared for investors, accelerators, strategic partners, and enterprise buyers

# Vision

From software and managed operations to reusable vertical AI infrastructure

TEMACORE is building a shared intelligence layer for complex workflows—combining software, AI, and accountable human control.

## Long-term ambition

**Reusable AI + workflow infrastructure for insurance, financial services, BPO, and other operations-heavy industries.**

INSURTECH

FINTECH

AI + BPO

ENTERPRISE SW

# The Problem

Complex industries still run on fragmented software, repetitive administration, and expensive manual handoffs.

01

## Fragmented core systems

Insurance, finance, and operations teams often work across disconnected tools, legacy workflows, and slow integrations.

02

## Repetitive admin work

Documents, approvals, onboarding, service queues, claims, and reporting remain heavily manual.

03

## Generic AI lacks context

Models alone do not provide workflow control, permissions, traceability, domain logic, or accountable review.

Disconnected data

Manual handoffs

High operating cost

Weak visibility

Compliance risk

**The opportunity: connect software, workflow context, and human-governed AI so repeatable work can be automated safely.**

# The Solution

A shared intelligence layer combining enterprise software, workflow automation, AI assistance, and human oversight.

**TEMACORE structures real business processes first—then adds AI where it can improve speed, consistency, visibility, and decision support.**

- 1 Digitize** Applications, portals, APIs, data + workflows
- 2 Assist** Document intelligence, routing, knowledge + decision support
- 3 Scale** Reusable vertical modules + human-governed automation

TEMACORE AI → InsurTech • FinTech • AI-enhanced BPO → reusable workflow infrastructure

# Products

Insurance OS today. Shared workflow intelligence expanding across verticals.

## Insurance Operating System

A robust platform spanning life and general insurance operations.

### TEMACORE AI layer

document intelligence • knowledge retrieval • routing • decision support • human-in-the-loop automation

# Technology & AI Platform

The moat is vertical workflow knowledge + software infrastructure + reusable intelligence.

## Why it compounds

Each deployment can deepen domain logic, reusable workflow patterns, integrations, and AI assistance across adjacent verticals.

### Vertical AI Layer

InsurTech, FinTech, BPO, enterprise operations

### Agent Orchestration

Assistance, routing, escalation, workflow actions

### Workflow Engine

Rules, approvals, notifications, exceptions

### Enterprise Data + APIs

Documents, policies, CRM, transactions, integrations

### Governance + Review

Role controls, auditability, human oversight

# Market Opportunity

Large adjacent markets create room for a focused vertical-AI company to expand over time.

## TAM / SAM / SOM framing

TAM: vertical AI + enterprise workflow automation. SAM: insurance, financial-services, and operations-heavy teams in North America, UK & Europe. SOM: targeted early enterprise deployments reachable through founder-led sales and partnerships.

# Business Model

A hybrid model: managed operations and implementation accelerate adoption; software and AI increase recurring leverage.

## 1 Platform Subscriptions

Recurring access to Insurance OS, portals, dashboards, and AI modules

## 2 Enterprise Licensing

Annual contracts for multi-entity, private, or regulated deployments

## 3 Implementation + Integration

Workflow mapping, configuration, migration, integrations, and rollout

## 4 AI Usage + APIs

Usage-based billing for document intelligence, agents, analytics, and model calls

## 5 Managed Operations / BPO

Human + AI delivery for support, back-office, and repeatable workflows

## 6 Enterprise Support

Optimization, monitoring, workflow improvement, and ongoing product support

Services generate workflow insight and customer access; recurring software, licensing, and AI usage drive increasing operating leverage.

# Traction

Early commercial validation with working vertical software and active AI development.

What this proves

**Temacore has moved beyond concept: working enterprise software, paid engagements, and an AI roadmap built around repeatable vertical workflows.**

## Milestone narrative

# Competitive Landscape

TEMACORE sits between legacy vertical suites, broad enterprise platforms, and model infrastructure.

## Core insurance suites

**Guidewire • Duck Creek**

Deep vertical functionality, but often complex, implementation-heavy, and less flexible for newer AI workflows.

## Enterprise platforms

**Salesforce • SAP • Oracle • ServiceNow • Microsoft**

Powerful horizontal systems, but broad rather than tailored to specific operating workflows.

## AI / model infrastructure

**OpenAI • Anthropic • Cohere**

Powerful model-layer enablers, but not complete vertical workflow systems on their own.

## TEMACORE

**Vertical AI + Insurance OS**

Domain software + workflow intelligence + operational knowledge + human-governed automation.

**Positioning: domain knowledge + enterprise software + workflow data + AI + human oversight.**

# Go-to-Market Strategy

Land through urgent workflow pain; expand through software, AI modules, and repeatable vertical playbooks.

**Sales motion**

Founder-led enterprise sales → reference deployments → partnerships → North America expansion → repeatable vertical playbooks.

# Product Roadmap

An 18-month path from working products and early revenue to repeatable enterprise deployment.

**Product strategy: strengthen shared AI, workflow, data, and governance layers once—then reuse them across vertical applications.**

# 18-Month Value Creation Plan

The round is designed to convert working products and early revenue into repeatable enterprise deployments and recurring platform growth.

# Funding Ask & Use of Funds

Working raise: \$1.25M to harden products, expand the AI layer, and prove repeatable enterprise sales.

**\$1.25M**

Early-stage / pre-seed-to-seed round

**18-month runway plan**

Target: enterprise-ready products + AI workflow layer + repeatable GTM

AI, ML + Software

35%

Cloud + Security

15%

Enterprise Sales + GTM

18%

Canada / North America

10%

Customer Implementation

Ops + Legal + Contingency

14%

Allocation includes 6% legal/finance/compliance + 8% contingency. Management plan; subject to diligence and hiring cadence.

CLOSING

# Temacore is building vertical AI for complex business operations.

One shared AI architecture across InsurTech, FinTech and AI-enhanced BPO—built on enterprise software, workflow data, and human-governed automation.
