

INVESTOR PITCH DECK

The AI Operating System for Modern Business

TEMACORE LLC is transitioning from a software development company into an AI-first enterprise technology platform for insurance, finance, BPO, healthcare, commerce, and operations.

working insurance products

AI

platform under construction

Vision

From outsourced execution to AI-powered enterprise infrastructure.

Temacore is building the operating layer that helps organizations automate complex work, make better decisions, and scale securely across regulated industries.

Long-term ambition

Globally adopted AI infrastructure for insurance, finance, healthcare, commerce, professional services, and government operations.

AI AGENTS

VERTICAL MODELS

WORKFLOW OS

SECURE APIS

The Problem

Business operations are still trapped between legacy software and manual execution.

01 Legacy core systems

Insurance, finance, and operations teams still rely on fragmented tools, slow implementation cycles, and rigid workflows.

02 Manual back-office work

Document review, approvals, support queues, claims, onboarding, and reporting often remain people-heavy and hard to monitor.

03 Generic AI is not enough

General-purpose models answer questions, but enterprises need controlled workflows, data permissions, audit trails, and vertical logic.

Disconnected data

Slow decisions

High operating cost

Weak visibility

Compliance risk

The opportunity: replace scattered tasks with an AI-native operating layer that understands the industry, automates the workflow, and keeps humans in control.

The Solution

A vertical AI operating system that combines software, agents, and managed execution.

Temacore creates industry-specific AI systems that sit on top of core workflows, documents, data, roles, approvals, and analytics.

- 1 Operate** Workflow automation + human oversight
- 2 Decide** AI-assisted underwriting, claims, risk, support
- 3 Scale** APIs, portals, multi-company and multi-country architecture

Core wedge: Insurance Operating System → Expansion layer: Temacore AI platform → Category ambition: Enterprise AI OS

Products

Insurance OS today. Temacore AI next.

Insurance Operating System

A comprehensive platform for life and general insurance operations.

Temacore AI platform

document intelligence • predictive analytics • decision intelligence • AI agents • vertical models

Technology & AI Platform

Vertical AI Models

Insurance, finance, healthcare, BPO, commerce

Agent Orchestration

Support, claims, sales, compliance, back-office

Workflow Engine

Rules, approvals, notifications, escalation

Enterprise Data Layer

Documents, CRM, policies, transactions, knowledge

Governance + Security

Audit trails, role access, compliance controls

Why it compounds

Every deployed workflow can enrich domain logic, reusable automations, templates, APIs, and enterprise AI agents.

Market Opportunity

Temacore sits at the intersection of multiple fast-growing enterprise technology markets.

TAM / SAM / SOM framing

TAM: enterprise AI + insurance software + automation. SAM: insurers, BPO-heavy services, finance and healthcare teams in North America, UK and Europe. SOM: early mid-market insurance and operations customers reachable through direct enterprise sales.

Business Model

Multiple revenue streams across software, implementation, AI usage, and managed services.

1 Recurring SaaS

Monthly subscriptions for Insurance OS, portals, dashboards, and AI modules

2 Enterprise Licensing

Annual contracts for multi-company, regulated, or private deployments

3 Implementation

Workflow mapping, configuration, integrations, migration, and rollout

4 AI Usage + APIs

Usage-based billing for agents, document intelligence, analytics, and model calls

5 Managed AI Services

Ongoing optimization, monitoring, support, and business process automation

6 Marketplace

Future integrations, industry templates, partner modules, and managed add-ons

Investor logic: services and implementation fund customer learning; recurring software and AI usage drive long-term margin expansion.

Traction

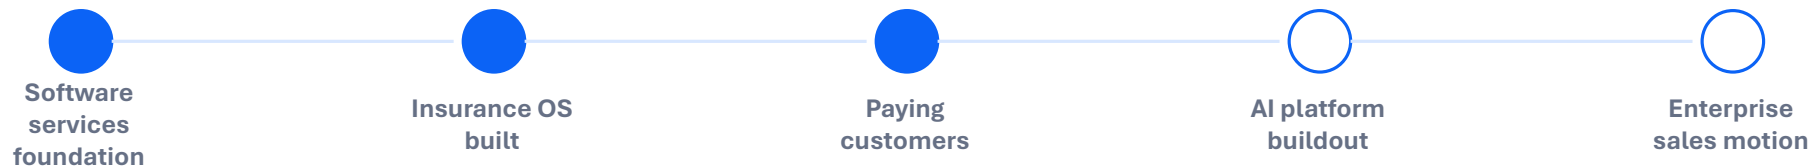

Early revenue validation with working enterprise software.

What this proves

Customers are willing to pay for Temacore-built operational software. The next step is to scale the platform, formalize enterprise sales, and build AI capabilities around repeatable vertical workflows.

Milestone narrative

Competitive Landscape

Temacore is building the vertical operating layer between generic AI and legacy enterprise suites.

Core insurance suites

[Guidewire](#) • [Duck Creek](#)

Deep insurance functionality, but heavier implementation cycles and less AI-native flexibility.

Enterprise platforms

[Salesforce](#) • [SAP](#) • [Oracle](#) • [ServiceNow](#) • [Microsoft](#)

Trusted global platforms, but broad rather than purpose-built for every vertical workflow.

Generic AI providers

[OpenAI](#) • [Anthropic](#) • [Cohere](#)

Powerful model layer, but enterprises still need controls, orchestration, data context, and audited workflows.

TEMACORE

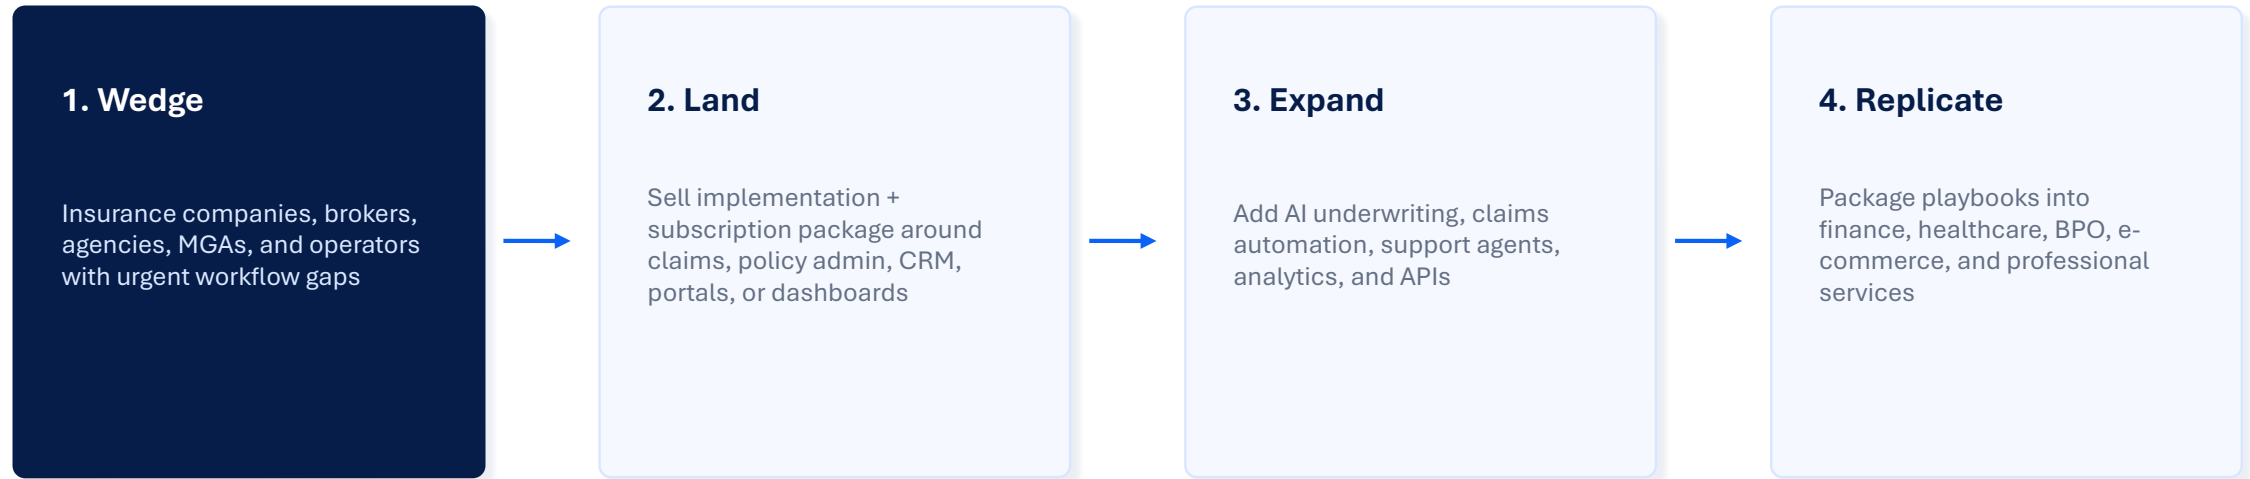

Insurance OS + Temacore AI

Vertical software + AI agents + implementation capability for regulated workflows and lower-cost deployments.

Positioning: combine vertical enterprise software, AI orchestration, operational implementation, and scalable APIs.

Go-to-Market Strategy

Start with insurance and operations-heavy companies, then expand into adjacent verticals.

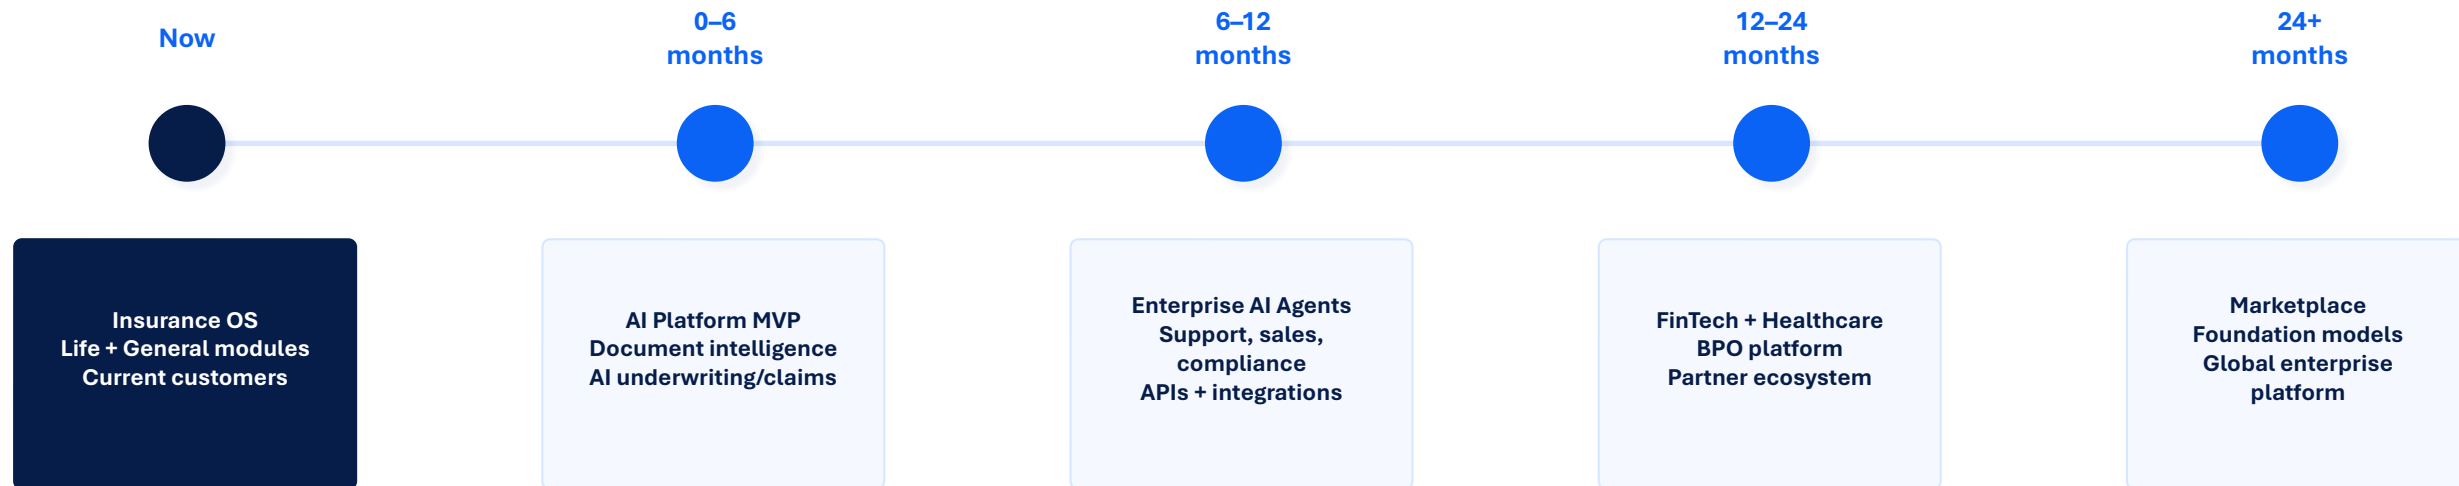

Sales motion

Founder-led enterprise sales → case studies → partner channels → vertical playbooks → marketplace integrations.

Product Roadmap

A staged path from insurance software to global enterprise AI infrastructure.

Product strategy: build the reusable operating system once, then launch vertical modules on top of the same AI, workflow, data, and governance foundation.

Financial Projections & Key Metrics

Three realistic scenarios based on customer growth, pricing, and enterprise contracts.

70–82% target

Gross Margin

6–15 months est.

CAC Payback

3–5x target

LTV:CAC

\$8k–\$60k+ est.

ACV Range

Funding Ask & Use of Funds

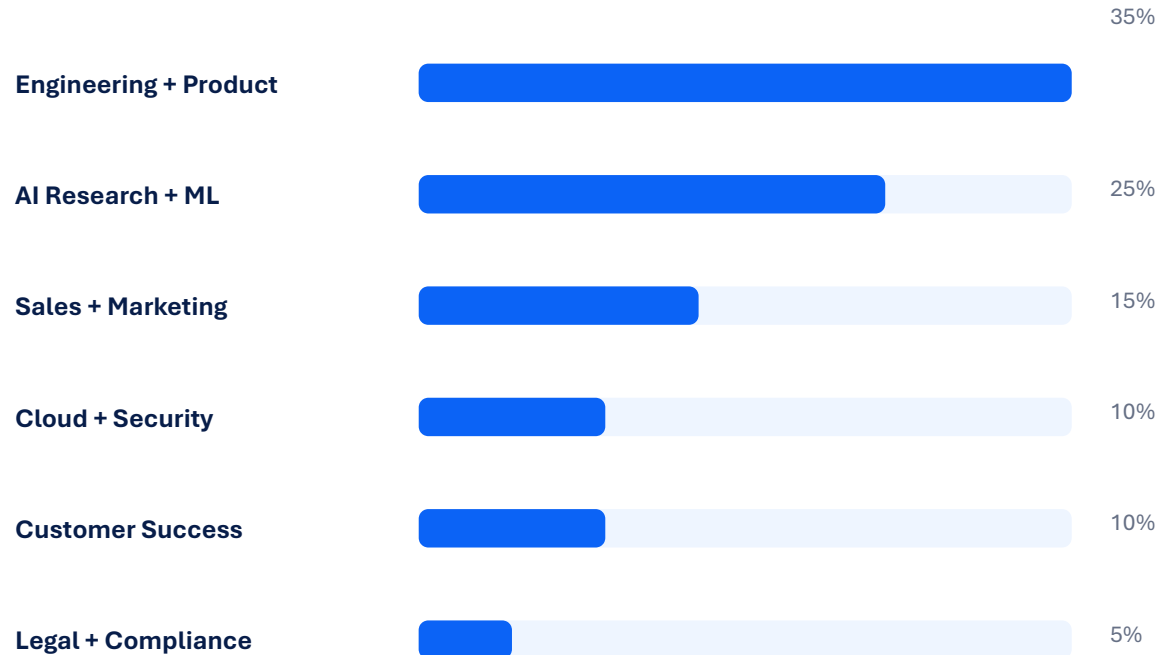

Recommended raise: \$1.25M to build the AI platform, harden product, and prove repeatable sales.

\$1.25M

Seed / pre-seed extension recommendation

18 months runway target

Milestone: AI MVP + enterprise-ready Insurance
OS + 10–20 paying customers

Funding logic: move from product services + early revenue into a scalable vertical AI platform with proof-ready enterprise deployments.

CLOSING

Temacore is building the AI operating layer for business execution.

Starting with insurance. Expanding into enterprise workflows.
Scaling into AI infrastructure for organizations that need
automation, visibility, and trust.
